

ELENA: Customizable Soldier Character Pack

In this package you will find two folders:

- ‘_elena’ containing the character model prefab as well as the necessary materials and textures (the source 4K PSD files are also provided).
- ‘_demo’ containing a scene that showcases the character under proper lighting conditions.

And two Unity Packages:

- ‘Elena_HDRP’ containing the package that is HDRP compatible.
- ‘Elena_URP’ containing the package that is URP compatible.

You will also find a custom shader in _elena > Model > Materials > Hair Shader named ‘ElenasHairShaderNormal’. This is used on the hair mesh to prevent graphical errors when viewing from certain angles.

Thank you for purchasing this package! We would really appreciate it if you left a review on the asset store.

Many thanks,
MacAlpine Ventures
